

Designed primarily as a thermoforming base web, Ecoflex™ is a mono PE material formulated with premium polymers, offering good puncture resistance and tear resistance. It is suitable for modified atmosphere packaging (MAP) or vacuum skin packaging (VSP) applications.

Ecoflex is designed for recyclability and offers excellent clarity and printability. The material is perfect for meat, dairy, and bakery thermoformed applications.

Ecoflex is part of a unique range of flexible barrier packaging solutions manufactured by specialists in extruded, mono, and multilayer materials. Our materials are designed for use in both food and non-food industries, ensuring a high level of protection for products where material function is a crucial requirement.

Sustainability

- The mono PE film is recyclable in those schemes that accept flexible plastic
- Meets OPRL guidelines for recycling

Operational Efficiency

- Good puncture resistance
- Improved tear resistance

Consumer Experience

- Excellent clarity for product visibility
- High quality print for branding and consumer information
