

Our range of nylon-based packaging materials offers maximized pack performance even for the most demanding applications.

The polyamide-based material is available in medium and high-barrier versions, offering excellent performance in thermoforming, puncture resistance, sealability, and visual clarity. The medium version can have either PE or PP sealing.

Excellent puncture resistance makes our range ideal for packing bakery products, meat with bones, ready meals, spices, and more.

Available as high-clarity transparent film or a range of colored versions.

Specifications tailored for pasteurization are available for demanding medical applications.

Sustainability

- Thanks to the material's toughness, the use of material resources can be minimized, enabling reduced food waste.

Operational Efficiency

- Runs on all standard FFS lines

Consumer Experience

- High clarity for best product visibility
- Excellent product protection to preserve shelf life
